INCREDIBLE VALUE - GREAT SELECTION - STUNNING DESIGN

(2 of 2 found this review helpful)

Unity Version 5.4.1f1

UPDATE - I have now been using this for awhile in our virtual world and I wanted to come back and add to my comments on this asset pack. It is just amazing. The artistic design, beauty, and quality are almost too good to believe! There is so much here - and all of amazing quality - that it is just mind boggling. And there are myriad premade decorator sets which are almost too easy to use. I just drop them into a room and it is practically decorated. And the paintings - there are a lot of them, in a variety of frame styles - are actually quite nice. I usually just use the frames and add my own textures, but these are great just the way they are. This is such a good value. I would be delighted to see this become a best seller in the Asset Store.

Don't worry about the words "Low Polly" and "Mobile Ready." They are, but they still look GREAT in our high quality non-mobile world, and the textures are amazing.

I have purchased several items from this designer, and am very impressed, and pleased. First class all the way!

Why waste your time hunting for free furniture, or waste your money on expensive furniture, when this has practically everything you will ever need for modern decorating work.

And ... it is high quality art, great selection, and low polly. The best of all worlds.

I really like this designer. Their work is great and their pricing is very generous. I hope you will support them so they can continue to offer more high quality, low-priced asset packs.

No PBL textures, lighting baked in albedo textures

(1 of 1 found this review helpful)

The assets are as described, but be aware that the meshes haven't any normal map nor metallic/smoothness maps. They only have an albedo map, and the lighting and ambient occlusion are baked in it.

For example : removing a magazine that was on a bed will reveal the darkness of the ambient occlusion baked on the bed sheets texture. Same for pillows, ... etc

I think it's a pack useful and affordable for quick prototyping though.

The idea behind this package was to have a highly optimized assets that can work on mobile still maintaining the quality. As for the maps we have included the RAW files for albedo, AO and Lighting maps so you can work with the information you want and leave the rest be.

Still if you could help us with what you are trying to achieve, we will try and help you as we possibly can.

Thanks!
